

Note: The evaluation was conducted in person with three participants who voluntarily provided feedback on the application. No personal data or identifiable information was collected, and no audio or video recordings were made during the session. All responses were anonymised and used solely for the purpose of evaluating the usability and effectiveness of the system.

Evaluation questions

Evaluation Setup

The evaluation was conducted with two undergraduate Computer Science students and an undergraduate business student in a controlled, in-person setting. Participants were asked to interact with the system and complete guided tasks while providing feedback based on predefined usability and functionality questions. The goal was to assess the clarity, usability, and decision-making support provided by the application.

Section 1 — Login & Security

1. Was the login process straightforward and easy to complete?

Participant 1: Login was easy.

Participant 2: Login was straightforward.

Participant 3: Login was straightforward.

2. Did you feel confident that your account and data were secure when logging in? Why or why not?

Participant 1: Assumes login is secured.

Participant 2: Login seemed secure.

Participant 3: Login is not secured (no password policies implemented).

3. Were there any parts of the login or authentication process that were confusing?

Participant 1: No part of the process was confusing.

Participant 2: It felt like a normal login system, no part of the process was confusing.

Participant 3: Login wasn't confusing.

4. Do you think the system should include additional security features (e.g., OTP, multi-factor authentication)?

Participant 1: System could be more secure using MFA.

Participant 2: Prefers current implementation and happy no special characters or password rule.

Participant 3: System should have more security features like OTP, MFA.

Section 2 — First Impression (UX clarity)

5. What do you think this application does based on your first look?

Participant 1: The application displays any problems in a server system.

Participant 2: Doesn't understand what application does.

Participant 3: Displays current status of ATMs.

6. Was it easy to understand what the dashboard is showing? Why or why not?

Participant 1: Subtitle gives context, it's simple to understand.

Participant 2: Looks nice and it's easy to know what dashboard is showing.

Participant 3: Easy to understand, not too much information you need to understand.

7. What was the first thing your eyes were drawn to on the dashboard?

Participant 1: Drawn to the anomaly subtitle and cards.

Participant 2: Drawn to the stars.

Participant 3: Drawn to view and status.

8. Did anything feel confusing or unclear when you first opened the app?

Participant 1: Nothing seemed unclear and confusing.

Participant 2: Nothing is confusing.

Participant 3: Nothing seemed confusing.

Section 3 — Navigation & Usability

9. How easy was it to navigate between pages (dashboard, detailed view, completed, starred)?

Participant 1: Easy to navigate, intuitive, simple, good side bar.

Participant 2: Easy to navigate.

Participant 3: Easy to navigate.

10. Were you able to find detailed anomaly information easily?

Participant 1: Yes, the anomalies were distinguishable.

Participant 2: Easy to find details.

Participant 3: Easy to find details.

11. Did you ever feel “lost” while using the app? If so, where?

Participant 1: Didn’t feel lost while navigating.

Participant 2: Didn’t feel lost.

Participant 3: Didn’t feel lost but thought navigating back with a back button was possible and the information logo which does nothing gave impression it does something.

12. How intuitive was the filtering (e.g., by ATM or anomaly type)?

Participant 1: Didn’t notice filtering functionality.

Participant 2: Can’t find filtering button.

Participant 3: Didn’t see filtering button.

Section 4 — Dashboard & Data Understanding

13. Does the dashboard give you a clear overview of system health?

Participant 1: Dashboard makes it easy to understand ATM details and what needs to be done.

Participant 2: Dashboard showed there was a severity difference.

Participant 3: Dashboard gives different scoring level like high, medium, warning.

14. Are the anomalies easy to identify and distinguish from each other?

Participant 1: Yes, anomalies are easily distinguishable.

Participant 2: Easy to distinguish anomalies.

Participant 3: Easy to distinguish anomalies.

15. Do you think the ranking of anomalies makes sense? Why or why not?

Participant 1: Ranking of anomalies makes sense.

Participant 2: Doesn't understand what ranking anomalies is.

Participant 3: Ranking of anomalies makes sense.

16. What additional information would you like to see on the main dashboard?

Participant 1: Nothing to add to the dashboard.

Participant 2: Nothing to add to the dashboard.

Participant 3: Would add change password.

Section 5 — Detailed Analysis (KEY SECTION)

17. Was the root cause explanation easy to understand?

Participant 1: Doesn't know what root cause means technically but assumes it meant for engineers.

Participant 2: Easy to understand root cause.

Participant 3: Easy to understand root cause.

18. Did the operational impact make sense and feel useful?

Participant 1: Operational impact was good and made sense.

Participant 2: Operational impact let you know the impact and how to move forward.

Participant 3: Operational impact is good and understandable.

19. Were the recommended actions clear and actionable?

Participant 1: Recommended action was good, everything seems clear, but I guess I am not the target audience.

Participant 2: System helps with recommended action so I can know what next to do.

Participant 3: Confident reacting with recommended action.

20. Do you feel confident making a decision based on the detailed analysis? Why or why not?

Participant 1: Yes, the recommended action explains what to do next.

Participant 2: Yes, the recommended action explains what I am to do next.

Participant 3: Yes, the recommended action gives the detail of next action.

Section 6 — Usefulness & Real-World Value

21. If you were responsible for managing ATMs, would this system help you? How?

Participant 1: Would definitely help monitor the ATM system.

Participant 2: It would help with the recommended action, so I know what to do next.

Participant 3: Yes, it shows everything you need to know.

22. What is the most useful feature of the application?

Participant 1: Having issues separated and ranking the anomalies by most critical.

Participant 2: Recommended action is the most useful feature.

Participant 3: Recommended action is the best feature.

23. What is the least useful or unnecessary feature?

Participant 1: I can't think of any worst feature.

Participant 2: Filtering is the least useful feature.

Participant 3: I logo is not necessary.

Section 7 — Improvements & Feedback

24. If you could change or add one feature to this application, what would it be?

Participant 1: Ranking with the time received along others would also be good.

Participant 2: Nothing to add or change.

Participant 3: Add an unmark complete button.

Features We Have Implemented Based on Feedback

- 1) We have removed the logo feature deemed unnecessary.
- 2) We have added time as one of the weights to rank anomalies.
- 3) We have implemented a better design to make filtering easier to find.
- 4) We have added back buttons for easier navigation.
- 5) We have added an uncheck mark to uncheck completed anomalies.

Feedback Features We Neglected

- 1) Implementing password policies
- 2) Adding a change password.
